Digital Disaster Social Work

- Promises and Challenges

持続可能な社会のための科学 と技術に関する国際会議 International Conference on Science and Technology for Sustainability 2022 "Disaster and Health"

Wednesday, January 25 and Thursday, January 26, 2023

International Conference on Science and Technology for Sustainability

Prof Johnston HC Wong

- BNU-HKBU United International College, Faculty of Humanities and Social Sciences
- International Chair, Social Workers Across Borders
- Board Member, Global Institute of Social Work
- ORCID: 0000-0002-9532-4512

Recent publications related to disasters

- Zhao, X. B., Wong, H. C. J., Lowe, C., Monaco, E., & Corbett, J. (2021), *Covid-19 Pandemic, Crisis Responses and the Changing World, Perspectives in Humanities and Social Sciences*, Ed., Singapore: Springer. ISBN: 978-981-16-2429-2
- Wong, H. C. J., (2018). *Disaster Social Work from Crisis Response to Building Resilience*, NY: NOVA Science Publishers. ISBN: 9781536144352
- Wong H. C. J., (2016). *Disaster Social Work Handbook* Guangzhou: Sun Yat Sen University Press, ISBN: 9787306056016.
- Wong, H. C. J. (2022). Economic, Social and Developmental Indicators (ESDI) to measure Earthquake Recoveries in China. *Austin Environmental Sciences*, 7(3): id1079, pp1-5.

Recent publications related to COVID-19

- Wong J. H. C. & Ho, G. W. (2022). Shielding without a Shield—Older People under COVID-19: A Comparison of Four Cities. *Social Sciences*, *11*(11), 498. https://doi.org/10.3390/socsci11110498
- Wong J. H. C., Ho, G. W., & He, X. L. H. (2022). A Safer World after Vaccination against COVID-19, Government Responses and Health Outcomes: A Comparative Study, *Medical Research Archives*, [online] 10(8).doi.org/10.18103/mra.v10i9.2987

Recent Developments of Disaster Risk Management

- 1. 3 International conferences
- 2. Health EDRM
- 3. Digitization of EDRM
- 4. Need for Digital Disaster Social Work

UNDRR International Conferences

Yokohama Strategy and Plan of Action for a Safer World 1994 **Hyogo** Framework of **Action** Plan 2005-2015 Sendai Framework for Disaster Risk Reduction 2015-2030

Yokohama Strategy and Plan of Action for a Safer World

Guidelines for Natural Disaster Prevention, Preparedness and Mitigation

World Conference on Natural Disaster Reduction Yokohama, Japan, 23-27 May 1994

World Conference on Disaster Reduction 18-22 January 2005, Kobe, Hyogo, Japan

Sendai Framework for Disaster Risk Reduction 2015 - 2030

Paradigms Shift 1: from emphasis on response to full cycle comprehensive management

Sendai Framework: Build back better

Priority One	Understanding Risks
Priority Two	Strengthening Governance
Priority Three	Investing Reduction
Priority Four	Enhancing Preparedness

WHO: Health EDRM 2019

Health Emergency and Disaster Risk Management Framework

Paradigm Shift 2 (WHO Health EDRM 2019: Whole government & whole community approach

From	То
Event-based	Risk-based (health and mental health risks)
Reactive	Proactive
Single-hazard	All-hazard
Hazard-focus	Vulnerability and capacity focus
Single agency	Whole-of-society
Separate responsibility	Shared responsibility of health and mental health
	Systems
Response-focus	Risk management
Planning for communities	Planning with communities

UNDRR – 2030 Agenda Paradigm Shift 3: from Risk Reduction to Capacity Building

Strategic Approach to Capacity Development for Implementation of the Sendai Framework for Disaster Risk Reduction

A Vision of Risk-Informed Sustainable Development by 2030

Summary 1: Opportunities and Challenges

Paradigm shifts

- 1. From response to comprehensive Disaster Management
- 2. From single agency to whole of government & whole community approach
- 3. From Risk reduction to Capacity Building

Hidden Underlying trends

- The encompassing impacts of technology particularly digitization
- The emergence of layman responders
- The need for Socpsychological EDRM

Appropriate **Technology** is always emphasized But technology cannot be separated from **Societies**

Yokohama Strategy:

5. The information, knowledge and some of the technology necessary to reduce the effects of natural disasters can be available in many cases at low cost and should be applied. Appropriate technology and data, with the corresponding training, should be made available to all freely and in a timely manner, particularly to developing countries.

Advances of Digital Technologies -

https://en.wikipedia.org/wiki/Digital_Revolution

Original Developments (1969–1989)

- Home computers
- Invention of the Internet

Recent Developments (1989-2005)

- Invention of the World Wide Web
- Remote sensing (RS)
- Geographical Information Systems (GIS)
- Global Positioning System (GPS)

Latest Developments (2006-present)

- Social Media
- Smart phones
- Big Data
- Artificial Intelligence
- Deep learning
- Internet of Things (IoT)

Early technologies applied to Disaster Management

• Remote Sensing: eg *Tsunameters*

Geographical Information System

Environmental Systems Research Institute (ESRI) White Paper May 2000: **Contributions of GIS**

Natural Disasters

- Volcanos/ Earthquakes/ Tsunamis
- Landslides
- Fires
- Floods
- Tornadoes/ hurricanes/

Human induced Disasters

- Health related epidemics
- Social unrests/ wars
- Toxic spills/ explosions/ fires

A Paradigm for Geographic Information Science's Contribution to Emergency Preparedness and Response

manhic information science and related technologies have already contributed in

Recent technologies applied to Disaster Management: **Social Media**

* Houston_et_al_EARLY_VIE
W_social_media_disasters.pdf

Table 1. Functions of disaster social media

Disaster social media use	Disaster phase
Provide and receive disaster preparedness information	Pre-event
Provide and receive disaster warnings	Pre-event
Signal and detect disasters	Pre-event → Event
Send and receive requests for help or assistance	Event
Inform others about one's own condition and location and learn about a disaster-affected individual's condition and location	Event
Document and learn what is happening in the disaster	Event \rightarrow Post-event
Deliver and consume news coverage of the disaster	Event \rightarrow Post-event
Provide and receive disaster response information; identify and list ways to assist in the disaster response	Event → Post-event
Raise and develop awareness of an event; donate and receive donations; identify and list ways to help or volunteer	Event \rightarrow Post-event
Provide and receive disaster mental/behavioural health support	Event \rightarrow Post-event
Express emotions, concerns, well-wishes; memorialise victims	Event \rightarrow Post-event
Provide and receive information about (and discuss) disaster response, recovery, and rebuilding; tell and hear stories about the disaster	Event → Post-event
Discuss socio-political and scientific causes and implications of and responsibility for events	Post-event
(Re)connect community members	Post-event
Implement traditional crisis communication activities	Pre-event → Post-event

Recent technologies applied to Disaster Management: **Big Data**

- 4 ways Big Data is revolutionizing emergency management
- Crisis mapping
- Connecting missing people with families
- Social Media Mining
- Event simulations
- It uses the analysis of community information in real-time to assist those in need and those looking for loved ones lost in disasters.
 - https://safetymanagement.eku.edu/blog/4-ways-big-data-is-revolutionizing-emergencymanagement/

Benefits of **Digital responders** (a drone) are:

- Faster than human movements, can assess damage in real time,
- Stronger than human strengths, smaller than human size, can go anywhere
- Sharper sights with High resolution mapping and Better memories
- reaching more people, sooner, more cost-effectively, and saving more lives.

Critical Rescue and medical treatment

- In addition, infrared cameras and advanced listening systems enable UAVs to uncover survivors from rubble or among flames and livestream night footage, increasing the success of critical rescue efforts.
- tele-medicines allow immediate services, provide digital medical records, and tele-mental health

Example 1 use of UAV: Global non-profit WeRobotics' programme, AidRoboti, Flying Labs™

- Following extensive flooding in 2017, its Peru Flying Labs formed the Mission PIURA multi-stakeholder consortium to create high-resolution aerial images of more than 7,000 hectares (nearly 17,300 acres) in just three days.
- These maps provided humanitarian agencies with a detailed understanding of the region including infrastructure damage, locations of stranded communities, safe areas for resettlement, and efficient routes for aid delivery.
- Digital elevation models enabled the government to continually monitor water level changes throughout the region.

Example 2: Cloud connectivity

- Cisco's Tactical Operations (TacOps), for example, takes advantage of the latest mobile networking technology, including cloud-controlled Meraki technology, to establish connectivity when disaster strikes. The TacOps team, supported by a global network of volunteers, has responded to 45 disasters on six continents, from the refugee crisis in Uganda or Nepal's 7.8 earthquake to Puerto Rico's Hurricane Maria, since 2005, .
- Ushahidi, an open-source crisis-mapping software created a database of geotagged and time-stamped reports gathered via email, SMS, or tweets. From this information, it builds a comprehensive, real-time picture of what is happening on the ground.

Example 3: GIS+SMS

- the World Food Programme (WFP) is challenged to assist 80 million people across 80 countries worldwide each year, moving three million tons of food. WFP's Mobile Vulnerability Analysis and Mapping (mVAM) uses mobile technology to address the barrier of aggregate and manual data collection
- The WFP and Cisco partnered to explore the use of SMS and voice response technology (IVR) to collect data directly from beneficiaries, making it possible to gather responses from some of the world's most vulnerable communities rapidly and in an affordable way.

Example 4: Visualization

 the American Red Cross' RC View, built on the ESRI data visualization platform. informs situational awareness by providing crucial data on water levels, shelter mapping (locations, number of available beds), road closures and more.

Example 5: use of Social media

- In Puerto Rico, global non-profit <u>NetHope</u> has partnered with Facebook to provide enhanced disaster response by effectively targeting social media audiences.
- Complex data analytics enable the organization to target the right messages to the right audiences, including information from third parties such as FEMA, Doctors Without Borders, and local non-profits.

Summary: increase situational awareness

 Mobile solutions, social media and crowd sourcing breaks down barriers to enable connectivity when we need it most Implications of Digital Technologies for Disaster Social Work the case of China

• Example 1: Social Work Intervention in Wuhan

• The City of Wuhan with a population of over 11 million, was locked down on January 23, 2020 due to the outbreak of a novel corona virus, later named the COVID-19 by WHO.

• Confirmed cases = 50333, and Deaths = 3869

• Up to April 17, 2020, (XinhuaNet, 2020-04-17 11:14:53).

Community Workers as first responders

- Social workers in Wuhan were promptly mobilized into community actions. They manned the estate checking points to enforce social isolation for districts with reported confirmed cases.
- They were deployed to reach out to the vulnerable groups bringing food and daily supplies to older and sick people;
- These semi-professional social workers became the primary force of post-disaster social and psychological support services.

The Good Companion Response Team, Yu, Guo & Shen (2020). A special Project of CASWE

- Distant Counseling Services Model, use of social media
 - Leading Social Worker + Psychological Counselor + Medical volunteer
 + SW Assistant + Ground volunteer
- 488 volunteers, 36 wechat groups, 4695 participants, 961
 cases, 45890 hours. tps://wx2.qq.com/cgi-bin/mmwebwxbin/webwxgetvideo?msgid=1901781812998766073&skey=%40crypt_a9f22d43_8e260
 5c191edbe2a8bcb9a338e3fc188

Example 2: Hybrid Community SW Intervention AtCER (IASSW-AIETS)

Example 3: Social Work Crisis Intervention Training and Supervision

Social Workers Across Borders (SWAB), • Advocacy for SW Response

- Crisis Intervention Training
- Trauma informed Supervision
- Innovative Community Crisis Intervention
 Promotion of SoPsy EDRM

Example 4: NCP (New Coronavirus Pneumonia) Life Support Network. Heavy rain fall on July 20, 2021, in Zhengzhou

380 people died in the city flood, 12 died in the Metro.

Social Media Matching for rescue

Disaster Digital Connections

- Strangers volunteers were formed into teams
- Connecting trapped people with rescue team;
- Connecting people who are starving with restaurants or food store donors;
- One team has recorded over 100,000 requests for help in 2 days.

Example 5: Zhengzhou SW services centers GIS+ Hybrid Counseling a project of CSWA

 Social work service units opened as temporary shelters and provide distant and in person counseling and information services.

Digital Disaster Social Work will not go away Sharing platforms to fight against Omicron

Summary: Digital Disaster Social Work is pushed to the front line

- 1. SW Disaster Responses has fallen into the **Digital Era**
- 2. It was pushed to the front line by community crisis and lay voluntary responders
- 3. It became part of Rescue, Relocation & Relief, as first responders, not confining to social psychological support
- 4. It quickly adapted to hybrid service modes of Online Training, Data Mining, Digital Information giving, GIS, E-Counseling, E-Assessment and cCBT

Implcatioins: Disaster-Scape: Governance=Technology + Community + Psychology

Challenges: we are not prepared T-O-E analysis

Social Workers and Digitization

Technology	Social Workers Lack digital knowledge and software skills
- digital	Social work services seldom develop digital platforms
Technology	Social Workers Lack in depth training in statistical analysis
- statistical	Social work services seldom develop social service database
Environment	China has high subscriptions of smart phones
- Technical	China has high availability of free WIFI and internet access
Environment	Vulnerable groups may face digital divide
- Human	Older people needs training in obtaining digital information
Organization -	Social Workers are inclined to face to face interactions
Individual	Social Workers are not trained in emergency and crisis interventions
Organization - Collective	Social work professionals are weak in cross-domain Interoperability Social work agencies have inadequate resources and flexibilities

Conclusions

- Roberts, Misra, & Tang (2021). Crisis Governance, Emergency Management, and the Digital Revolution (interview w UK Emergency Managers) discovered that:
 - Digital technologies have fundamentally altered emergency and crisis management work through increased potential for role ambiguity, role conflict, distraction, and overload

- Perhaps it also applies to Digital Disaster Social Workers.
- However, digital confusions could only be solved by digital innovations and inventions.

•If we can't beat them, join them.
